A Bet365 tem ganhado vários prêmios recentemente, incluindo Melhor Produto de Apostas Esportivas Móveis de 2023, Melhor Casa de apostas de 2023 e Melhor Operador de Apostas Esportivas de 2023. Agora que a Bet365 é legal e disponível nos EUA, você tem a oportunidade de acessar uma das melhores casas de apostas esportivas do mundo.

Mas o que esses prêmios realmente significam? E como você pode usar isso em fluminense bet própria experiência de apostas esportivas? Vamos quebrar tudo isso e mostrar exatamente o que a Bet365 tem a oferecer, especialmente quando se trata de apostas na linha de dinheiro.

O que é uma Aposta money line - linha de dinheiro?

Se você souber que as odds da equipe escolhida eram -400, isso significa que se você apostar com sucesso \$400, você vai ganhar \$100 no pagamento

Knowing how to count outs in poker is one of the first mathematical principles you must master when starting.

Fortunately, counting poker outs is not too difficult, and there are some easy ways to figure out how many outs you have in each situation.

But what exactly are outs in poker, and how can you use them to be a better poker player?

We will explain all that and more. By the time you are done reading, you will know what outs are, how to count them, and how to calculate your equity based on the number of outs you have.

What are Poker Outs?

Outs in poker are cards that help improve your hand.

For example, if you are holding a pair of kings against pocket aces, you have two outs to hit your set since only two kings are left in the deck.

Of course, outs come into play much more once the flop is dealt and you are working with five cards. In this case, you will often not have a made hand yet and will be looking to improve, so understanding this concept is essential.

Any card that will improve your hand can be considered an out, although not all poker outs carry the same weight, so let's dive into that a bit deeper.

How to Counts Outs in Poker

Since you already know what poker outs are, let's discuss how to count it.

Simply put, you need to figure out which cards will help improve your hand and then think about all the cards in the deck.

In the example of a flush draw, you currently hold two hearts in your hand, and there are two hearts on the flop. Since we know there are 13 hearts in the deck, you have nine outs to make your flush.

However, other cards may also help your hand. For example, if your flush draw contains an ace, which is an over card to the board, any of the remaining aces could make you the top pair.

Since you are holding the ace of hearts, three additional aces could land on the turn or river, increasing your outs count by three.

Whatever your current hand is, you should try to think about all cards that will improve it on the turn or river and count those cards to come up with your total outs count.

As you get better at it, you will immediately know how many outs you have in some common situations.

Here are a few frequent flop situations that arise in poker that you should know by heart:

Inside Straight Draw: 4 outs to a straight

4 outs to a straight Set: 10 outs to a full house or four of a kind

10 outs to a full house or four of a kind Open-Ended Straight Draw: 8 outs to a straight

8 outs to a straight Flush Draw: 9 outs to a flush

9 outs to a flush Open-Ended Straight Flush Draw: 15 outs to a straight or a flush

It is important to know that not all outs are "clean," so it is important to separate between cards that can turn our hand into nuts and ones that can only make it slightly stronger.

You have nine outs to hit your flush if you have a flush draw

How to Use Poker Outs in Game

So now you know how to count outs in poker, but you still don't really know how this will help you be a better poker player.

After all, knowing how many cards will help you is nice, but it won't help make those cards appear on the turn or river.

Since there is no way to know which cards are coming, all we can do is calculate probability and use it to our advantage.

This probability is known as equity in poker, and it determines how likely we are to improve our hand and ultimately win the pot by simply having the best hand by showdown.

Knowing the number of outs we have is the first step to calculating equity in a poker hand. The next step is to use maths to calculate what percentage of the time you will make your hand.

Let us assume we are holding Ks Qs on a board of As 9s 4c. Our opponent is relatively tight and passive and is now betting into us, which means they are likely holding at least a pair of aces. In this case, we have nine outs to make our flush, and any other outs we may have won't really help us, as we will still probably lose if a K or Q comes on the turn or river.

We know that there are 52 cards in the deck, and we can see five of those cards, leaving us with a total of 47 cards left, nine of which are spades.

A simple division of $47:9$ tells us that we are looking at a ratio of 4.22:1, which translates into 19.16%. However, it is also important to remember that there are still two cards left to come.

Since both turn and river are going to be dealt out, we need to calculate for both those cards and realize that our equity will slightly improve going to the last card if the turn is not a spade since there will be one fewer card in the deck.

So for the turn, we have 46 cards left with still all of the 9 spades in the deck. Using the same logic and dividing $46:9$, we get a 4.11:1 ratio which gives a 19.57% chance of hitting your flush.

When all these calculations are considered, the equity we come up with is 38.73%.

This does not include the runner-runner straight possibility when holding KQ, so the actual number is slightly different, but it is the best way to illustrate this example. That being said, these calculations can take some time to do at the table and are very impractical. Therefore, there is a much simpler solution to calculating your approximate equity based on your number of poker outs.

Using the Rule of Two and Four

The equity calculations we did in the previous example are kind of complicated, and it would be tedious to do them in the middle of a hand while facing the pressure of a bet.

Instead, there is a much simpler way to calculate your equity without complicated math.

If you are on the flop, take the number of outs and multiply it by four.

If you are on the turn, take the number of outs and multiply it by two.

In the previous example, we looked at an example of a flush draw, and we calculated the equity of 38.73% on the flop and 19.57% on the turn.

If we apply the rule of two and four to this example, we will come up with 36% (9×4) on the flop and 18% (9×2) on the turn.

You can see that these numbers are not perfect, but they are within 2% of the real equity, and they take only a few seconds to calculate.

We also highly recommend remembering the equities of the most common scenarios, such as flush draws, straight draws, and sets by heart, but using the rule of two and four in all other scenarios.

Q9 had 6 outs on the flop, which would mean approximately 24% equity

Calculating Equity with More than Nine Outs

As the number of outs becomes higher, using the rule of two and four will start to deviate from true equity more and more.

For that reason, there is another formula you should remember and use when you have more than nine outs on the flop in a poker hand.

The formula is:

$$\text{Equity} = (\text{Number of outs} \times 4) - (\text{Number of Outs} - 8)$$

Let us imagine we have 15 outs and run the calculation:

$$\text{Equity} = (15 \times 4) - (15 - 8)$$

$$\text{Equity} = 60 - 7$$

$$\text{Equity} = 53\%$$

We would have got 60% using the rule of two and four, while the new formula says 53%.

The true equity of this situation is 54.1%, which means that this formula gets us closer to the exact result than the previous one.

Combo Draws and “Dirty Outs”

There are many possible situations that can arise in a hand of Texas Hold'em, and our poker outs count can go up and down with every new card that hits.

When counting outs, we should distinguish between outs that make us the nuts and those that simply improve our hand.

For example, let us imagine a scenario in which we are holding Jc Tc, and the flop comes out Ac 9c 8s. In this scenario, we have open-ended straight and flush draws.

Our open-ended straight draw will give us the absolute nuts on both sides, while our flush draw will give us a strong flush, also very likely to be the best hand.

Since this is the case, we can count all our outs in full and consider this as a 15-out situation, a fairly rare occurrence in Texas Hold'em.

On the other hand, imagine holding Ah 7h on a board of Kh 6h 4d. Here, nine outs to a flush give us the absolute nuts and are considered “clean” outs.

We could also hit an ace which would give us top pair, but having top pair in no way guarantees that we have the best hand. In fact, hitting that card could even cost us some money.

Depending on factors such as the player we are playing against and the positional situation, we may still consider the ace to some degree but definitely should not count it as a “clean” out to win this pot.

Outs can get even dirtier than that, as hitting the second or third pair to the board can also win us the pot sometimes, but such cards should never be counted as true poker outs.

When calculating your equity in a poker hand, you should only seriously consider poker outs that guarantee you will have a very strong hand that's unlikely to be beaten by your opponent's perceived hand.

What is Next?

Now that you know how to count outs in poker and turn the number of outs into equity, you can start applying this knowledge at the tables.

We highly recommend looking into our guides on pot odds and implied odds, which will help you further understand how to use equity and make better decisions.

After all, knowing you will win a hand 36% of the time is not enough to beat good poker players in the long run, so you should use this information as a starting point. Combine your understanding of counting outs, pot odds, and implied odds, and you will be working with an arsenal that can help you defeat even proficient poker players.

Arte performático desafiante: a experiência "Sculpture Tactile" de Yves Klein fluminense bet NY

Duas vezes por semana neste outono, um artista performático nu senta-se dentro de uma caixa de madeira pequena fluminense bet uma galeria de Nova Iorque, esperando ser tocado. Através de orifícios fluminense bet cada lado do caixote, os braços dos visitantes se estendem e tocam pele ou cabelo; continuam por um tempo para determinar a parte do corpo ou recuam rapidamente. Trata-se de uma forma de intimidade rápida, incômoda, reveladora e, possivelmente, profunda para alguns.

Concebido quase sete décadas atrás pelo artista e "enfant terrible" francês Yves Klein, a obra audaciosa, que ele intitulou "Sculpture Tactile", nunca foi realizada fluminense bet vida dele - de acordo com suas próprias escritas fluminense bet 1957, ele reconheceu que teria "o

departamento de polícia colado fluminense bet minha traseira imediatamente" se tivesse feito isso. Mas hoje, com regras sinalizadas sobre comportamento apropriado e consentimento - e um guarda próximo - para garantir a segurança do artista performático, a obra pode ser experimentada (literalmente) pela primeira vez na exposição "Yves Klein: O Mundo Tangível" na Lévy Gorvy Dayan no Upper East Side.

Um artista pioneiro fluminense bet movimentos abstratos e conceituais

Na vida curta de Klein, que faleceu de um ataque cardíaco aos 34 anos, ele criou trabalhos provocativos e experimentais no período pós-Segunda Guerra Mundial, exibindo telas monocromáticas fluminense bet seu pigmento azul característico, dirigindo modelos nus para imprimir seus corpos pintados fluminense bet tela e, fluminense bet uma ocasião, apresentando um show de galeria de uma sala inteiramente vazia.

"Yves Klein: O Mundo Tangível" reúne muitas das obras menos conhecidas do artista. Elas concentram-se amplamente no corpo, desde as pinturas fluminense bet grande escala de Klein feitas por "pincéis vivos" - seus modelos pintados - até uma série de peças baseadas fluminense bet fogo que envolviam queimar tecido ao redor das figuras de mulheres.

"Eu queria mostrar o amor de Yves Klein pelo corpo e a vivacidade que o corpo representa", disse Dominique Lévy, uma co-fundadora da galeria, que representa o acervo de Klein. "Acho que é relevante hoje fluminense bet dia trazer (através) dessa força vital humana profunda".

Considerações contemporâneas para o trabalho de Klein

No momento fluminense bet que Klein estava trabalhando, movimentos abstratos haviam tomado a cena do mundo da arte, enquanto o arte conceitual ainda estava germinando. A incorporação de performance de Klein, seu enfatize fluminense bet processos e fluminense bet busca por alcançar o inefável mais tarde se tornariam marcadores de movimentos na década de 1960.

"Ele é o primeiro artista a realmente incorporar a performance como ato artístico e como prática", disse Lévy. "As atrocidades da guerra haviam profundamente influenciado a expressão criativa e a forma como os artistas conve
