a : roleta-

When thinking of a casino, roulette is one of the first games that comes to mind. After all, it has been featured in many gambling movies and advertisements, transforming the game into a gambling icon.

Nothing seems more exciting than sitting around a roulette wheel and enjoying the company of several people while betting. It is a game that allows us to enjoy the thrill of the bet while taking as much risk as we want to bet.

And although it is an entirely random game, and there is no foolproof way to win, many players have developed strategies according to their playing styles. In them, we can appreciate specific rules that allow them to make a profit and successfully withdraw from the table.

With this in mind, we have decided to share 4 of the most used strategies when playing roulette so that by having them in mind, you can decide if they go well with your style of play.

Martingale System: A perfect system for maximizing roulette bets

We all know that there are roulette odds, rules and bets. These are the ones that determine how the game works and how much we win, depending on our predictions. However, the Martingale system in all casino games is based on a basic strategy: it does not consider the odds.

To do so, the system relies on a first guess: we will eventually win. Therefore, we must try to make the most of that winning chance and get back all that we have lost or more.

To use the Martingale system, we must first place a base bet amount that is not too high. If our bet is successful, we will continue betting the same amount. If it fails, we will double the bet amount.

This strategy seeks to recover everything we have lost by constantly doubling our bet. Our profit will be based chiefly on moments we bet and hit immediately.

Fibonacci System: Using mathematics to improve our profits

The Fibonacci System is another system in which we must evolve the bet as we lose. However, we follow the so-called “Leonardo Pisa’s numerical succession” instead of doubling it.

Applying this method means that, in case of losing, we will add the two previous numbers that we have bet following this order: 1-2-3-5-8-13-21-34. On the other hand, if we are right in one of the best, we will go back to two levels in the list.

This method is a long-term strategy, just like the Martingale System. It is recommended that we set a maximum bet, or we run the risk of running out of money quickly.

Paroli System: Ideal for long runs

The Paroli System works in reverse to the two systems we have already explained. In this

system, the player seeks to increase the bet whenever he wins, reserving a part of the winnings to continue betting in the future.

On the other hand, if the player suffers a loss, he returns to the initial bet amount immediately. It is a conservative strategy that seeks more than anything else to take advantage of the fun of the moment while taking advantage of the winnings we are obtaining to continue paying for the game. On the other hand, unlike the two previous systems, it usually prevents our money from running out so quickly.

Attila Method: Playing with more numbers

This method is named after one of the greatest warriors in history. It follows the principles of the pillage strategies used by this Hun: the numbers are where the profit is. To work on this system, you must attack groups of nine numbers and leave aside single bets.

To begin with, we bet one chip on each member of a group of 9 numbers. If we lose, we add a chip to one of the numbers and bet again. If we lose again, we add another chip to a second number leaving two numbers with two chips and the others with one chip.

We will continue with this procedure until we win, and when we do so, we will return to the starting point. With this method, we seek to ensure a greater possibility of coverage of the numbers mathematically. Similarly, the Attila method is not reserved for nine numbers: there are variants with six numbers, seven, and even eight digits.

Do these roulette strategies ensure that I will win?

The magic of roulette lies in the chance and excitement of not knowing what will happen every time we bet. It is an entirely random game, so no infallible strategy will allow us to profit from each spin.

However, these strategies are intended to facilitate the management of the capital we have to bet. Their mission is not to assure us the victory but to allow our money to last as long as possible so that we can continue enjoying the game.

The truth is that not all roulette strategies are ideal for us. We must try each one and change them until we choose the one that best suits our style of play.
