[roulette internet](#)

What is the most successful roulette strategy? While there is no strategy that can guarantee a profit in the long run when playing roulette, the Martingale betting system is often regarded as the most successful strategy. It is easy to use and can provide good returns.

[roulette internet](#)

Probability The probability of winning with each bet

Here are a bunch of charts and tables for different probabilities in both European and American roulette.

There's also some handy (but not necessarily easy) information at the bottom about working out roulette probabilities, plus a little bit on the gambler's fallacy.

1. European roulette

Probability of each bet type winning on a European roulette wheel.

Bet Type	Fraction	Ratio	Percentage
Even (e.g. Red/Black)	1/2	0.06 to 1	48.6%
Column	1/3	0.08 to 1	32.4%
Dozen	1/3	0.08 to 1	32.4%
Six Line	1/6	0.17 to 1	16.2%
Corner	1/9	0.25 to 1	10.8%
Street	1/12	0.33 to 1	8.1%
Split	1/19	0.50 to 1	5.4%
Straight	1/37	0.00 to 1	2.7%

A simple bar chart to highlight the percentage probabilities of the different bet types in roulette coming in.

The same color in a row

How unlikely is it to see the same color 2 or more times in a row? What's the probability of the results of 5 spins of the roulette wheel being red? The following chart highlights the probabilities of the same color appearing over a certain number of spins of the roulette wheel.

A graph to show the probability of seeing the same color of red/black (or any evens bet result for that matter) over multiple spins.

Number of Spins	Ratio	Percentage
1	1.06 to 1	48.6%
2	3.23 to 1	23.7%
3	7.69 to 1	11.5%
4	16.9 to 1	5.60%
5	35.7 to 1	2.73%
6	74.4 to 1	1.33%
7	154 to 1	0.65%
8	318 to 1	0.31%
9	654 to 1	0.15%
10	1,346 to 1	0.074%
15	49,423 to 1	0.0020%
20	1,813,778 to 1	0.000055%

Example: The probability of the same color showing up 4 times in a row is 5.60% .

As the graph shows, the probability of seeing the same color on consecutive spins of the roulette wheel more than halves (well, the ratio probability doubles) from one spin to the next.

I stopped the graph at 6 trials/spins, as that was enough to highlight the trend and produce a prettier probability graph.

Other probabilities

Event Ratio Percentage The same number (e.g. 32) over 2 spins. 1,368 to 1 0.073% The result

being 0 . 36 to 1 2.7% The 0 appearing at least once over 10 spins. 2.7 to 1 27.0% The same color over 2 spins. 3.23 to 1 23.7% Guessing color and even/odd correctly. 3.11 to 1 24.3% Guessing color and dozen correctly. 5.16 to 1 16.2% Guessing dozen and column correctly. 8.25 to 1 10.8%

Rank Casino Rating Payment Methods Payout Time Links No casinos available :(

2. American roulette

Here are a few useful probabilities for American roulette.

Alongside the charts, I've included graphs that compare the American roulette probabilities to those of the European roulette probabilities. The difference in odds and probability for these two variants is explained in the American vs. European probability section below.

Probability of each bet type winning on an American roulette wheel.

Bet Type	Fraction	Ratio	Percentage
Even (e.g. Red/Black)	1/2	1.11 to 1	47.4%
Column	1/3	2.16 to 1	31.6%
Dozen	1/3	2.16 to 1	31.6%
Six Line	1/6	5.33 to 1	15.8%
Corner	1/9	8.50 to 1	10.5%
Street	1/12	11.67 to 1	7.9%
Split	1/19	18.00 to 1	5.3%
Straight	1/38	37.00 to 1	2.6%

A simple bar chart to highlight the percentage probabilities of winning with the different bet types in American and European roulette.

The same color in a row

When playing on an American roulette wheel, what's the probability of seeing the same color appear X times in a row? The table below lists both the ratio and percentage probability over successive numbers of spins.

A graph to show the probability of seeing the same color of red/black on an American roulette table (compared to the odds on a European table).

Number of Spins	Ratio	Percentage
1	1.11 to 1	47.4%
2	3.45 to 1	22.4%
3	8.41 to 1	10.6%
4	18.9 to 1	5.04%
5	40.9 to 1	2.39%
6	87.5 to 1	1.13%
7	186 to 1	0.54%
8	394 to 1	0.25%
9	832 to 1	0.12%
10	1,757 to 1	0.057%
15	73,732 to 1	0.0014%
20	3,091,873 to 1	0.000032%

Example: The probability of the same color showing up 6 times in a row on an American roulette wheel is 1.13% .

The probability of seeing the same color appear on successive spins just over halves from one spin to the next.

You'll also notice that it's less likely to see the same color appear on multiple spins in a row on an American roulette wheel than it is on a European wheel. This is not because the American wheel is "fairer" and dishes out red/black colors more evenly — it's because there is an additional green number (the double zero - 00) that increases the likelihood of disrupting the flow of successive same-color spins.

Other probabilities

Event	Ratio	Percentage
The same number (e.g. 32) over 2 spins.	1,444 to 1	0.069%
The result being 0 or 00 .	18 to 1	5.26%
The 0 or 00 appearing at least once over 10 spins.	0.9 to 1	52.6%
The same color over 2 spins.	3.45 to 1	22.4%
Guessing color and even/odd correctly.	3.22 to 1	23.7%
Guessing color and dozen correctly.	5.33 to 1	15.8%
Guessing dozen and column correctly.	8.5 to 1	10.5%

3. Why is there a difference between European and American roulette?

The probabilities in American and European roulette are different because American roulette has an extra green number (the double zero - 00), whereas European roulette does not.

Therefore, the presence of this additional green number ever so slightly decreases the probability of hitting other specific numbers or sets of numbers, whether it be over one spin or over multiple spins.

To give a simplified example, lets say I have a bag with 1 red, 1 black and 1 green ball in it. If I ask you to pick out one ball at random, the probability of choosing a red ball would be 1 in 3.

Now, if I added another green ball so that there are now 2 green balls in the bag, the probability of picking out a red ball has dropped to 1 in 4.

This exact same idea applies to all the probabilities in American roulette (thanks to that extra 00 number), just on a slightly bigger scale.

Fact: This difference in the probabilities also has a knock-on effect for the house edge too. So essentially, in American roulette you have a slightly worse chance of winning, but the payouts remain the same.

Note: You can find out more about the differences between these two games in my article American vs European roulette.

4. Mathematics

a. Formats

There are a number of ways to display probabilities. On the roulette charts above I have used; ratio odds, percentage odds and sometimes fractional odds. But what do they mean?

Percentage odds (%) This is easy. This tells you the percentage of the time an event occurs.

Ratio odds (X to 1) For every time X happens, the event will occur 1 time.

Example: The ratio odds of a specific number appearing are 36 to 1, which means that for every 36 times the number doesn't appear, it will appear 1 time. Fractional odds (1/X) The event occurs 1 time out of X amount of trials.

Example: The fractional odds of a specific number appearing are 1/37, which means that it will happen 1 time out of 37 spins.

As you can see, fractional odds and ratio odds are pretty similar. The main difference is that fractional odds uses the total number of spins, whereas the ratio just splits it up into two parts. The majority of people are most comfortable using percentage odds, as they're the most widely understood. Feel free to use whatever makes the most sense to you though of course. They all point to the same thing at the end of the day.

b. Calculating

From my experience, the easiest way to work out probabilities in roulette is to look at the fraction of numbers for your desired probability, then convert to a percentage or ratio from there.

For example, let's say you want to know the probability of the result being red on a European wheel. Well, there are 18 red numbers and 37 numbers in total, so the fractional probability is 18/37. Simple.

With this easy-to-get fractional probability, you can then convert it to a ratio or percentage.

Single spin

Calculation: Count the amount of numbers that give you the result you want to find the probability for, then put that number over 37 (the total number of possible results).

For example, the probability of:

Red = 18/37 (there are 18 red numbers)

Even = 18/37 (there are 18 even numbers)

Dozen = 12/37 (there are 12 numbers in a dozen bet)

8 Black = 1/37 (there is only one number 8)

) Red and Odd = 9/37 (there are 9 numbers that are both red and odd)

Dozen and Column = 4/37 (there are only 4 numbers in the same dozen and column)

As well as working out the probability of winning on each spin, you can also find the likelihood of losing on each spin. All you have to do is count the numbers that will result in a loss. For example, the probability of losing if you bet on red is 19/37 (18 black numbers + 1 green number).

Note: To reduce a fraction down to 1/X, just divide each side by the number on the left. e.g. a bet on red has the probability of 18/37, divide each side by 18 and you've got 1/2.05.

Multiple spins

Calculation: Work out the fractional probability for each individual spin (as above), then multiply those fractions together.

For example, let's say you want to find the probability of making correct guesses on specific bet types over multiple spins:

Spin 1: Red = 18/37

Spin 2: Dozen bet = 12/37

Probability = (18/37) x (12/37) = 1/6.34

Spin 1: Straight Bet (e.g. 32) = 1/37

) = 1/37 Spin 2: Straight Bet (e.g. 15) = 1/37

) = $1/37$ Probability = $(1/37) \times (1/37) = 1/1369$

Spin 1: Black and Even = $9/37$

Spin 2: Odd = $18/37$

Spin 3: Column = $12/37$

Probability = $(9/37) \times (18/37) \times (12/37) = 1/26.06$

To keep it simple, I reduced the all fractions for the results above down to the $1/X$ format.

c. Converting

Having probabilities in a fraction format like $18/37$ or $1/2.05$ is okay, but sometimes it's more useful to see the probability as a percentage or a ratio. Luckily, it's pretty easy to convert to either of these from a fraction.

Fraction to ratio

Conversion: Reduce the fraction to the $1/X$ format, then take 1 away from X. This will give you the X to 1 ratio.

For example, what is a dozen bet ($12/37$) as a ratio?

Reduce the fraction to $1/X$. $12/37 = 1/3.08$ (you divide both sides by the left-hand side number, which in this example is 12) Take 1 away from X. $3.08 - 1 = 2.08$ Ratio = 2.08 to 1

Fraction to percentage

Conversion: Divide the left side by the right side, then multiply by 100.

For example, what is a corner bet ($4/37$) as a percentage?

Divide the left side by the right side. $4 \div 37 = 0.1081$ Multiply by 100. $0.1081 \times 100 = 10.81\%$

Percentage = 10.81%

5. Important fact about probability

The result of the next spin is never influenced by the result of previous spins.

A quick example

The probability of the result being red on one spin of the wheel is 48.6%. That's easy enough.

Now, what if I told you that over the last 10 spins, the result had been black each time. What do you think the probability of the result being red on the next spin would be? Higher than 48.6%?

Wrong. The probability would be exactly 48.6% again.

Why?

The roulette wheel doesn't think "I've only delivered black results over the last 10 spins, I better increase the probability of the next result being red to even things up". Unfortunately, roulette wheels are not that thoughtful.

If you had just sat down at the roulette table and didn't know that the last 10 spins were black, you wouldn't have a hard time agreeing that the probability of seeing a red on the next spin is 48.6%.

Yet if you are aware of recent results, you're tempted to let it affect your judgment.

Each and every result is independent of the last, so don't expect the results of future spins to be affected by the results you've seen over previous spins. If you can learn to appreciate this fact, you will save yourself from some disappointment (and frustration) in the future.

Believing that a certain result is "due" because of past results is known as the gambler's fallacy.

What about those graphs above?

In the graph of the probability of seeing the same color over multiple spins of the wheel, it shows that the probability of the result being the same color halves from one spin to the next.

However, this is only if you're looking at the entire set of trials/spins from the start.

If the last spin was red, the chances of the next spin being red are still 48.6% — they do not drop to 23.7%. On the other hand, if you hadn't spun the wheel to see the first red result and wanted to know the probability of seeing red over the next 2 spins (and not just on the next 1 spin), the probability would be 23.7%.

American Roulette: Uma Noite na Vegas de Brasileiro

No fim de semana, muitos brasileiros adoram desfrutar de um bom cassino. Um dos jogos de cassino mais populares é a roleta americana, também conhecida como "blaze". Nesse artigo, vamos mergulhar no emocionante mundo da roleta americana e mostrar por que ela é tão querida pelos jogadores do mundo inteiro.

A roleta americana é um jogo de azar clássico que data do século XVIII. O jogo é jogado em roulette internet uma mesa com uma roda que tem 38 ranhuras numeradas de 0 a 36, além de uma ranhura adicional marcada com um sinal de dupla zero (00).

No jogo, os jogadores podem fazer apostas em roulette internet um único número ou em roulette internet um grupo de números. Existem diferentes tipos de apostas, incluindo apostas internas (que envolvem números individuais ou grupos de números adjacentes) e apostas externas (que envolvem categorias maiores de números).

Uma das coisas que tornam a roleta americana tão emocionante é a roleta em roulette internet si. Quando a bola é lançada na roda, ela gira em roulette internet alta velocidade, criando uma atmosfera eletrizante no cassino. Os jogadores mantêm os dedos cruzados enquanto assistem à bola girar e esperam ansiosamente para ver em roulette internet qual ranhura ela cairá.

Outra coisa que torna a roleta americana tão popular é a chance de ganhar dinheiro rápido. Embora as chances de ganhar em roulette internet um único número sejam relativamente baixas, as apostas externas oferecem probabilidades mais altas e maior probabilidade de ganhar.

No entanto, é importante lembrar-se de que a roleta americana é um jogo de azar e, como tal, envolve risco. Portanto, é sempre importante jogar de forma responsável e dentro dos seus limites.

Em resumo, a roleta americana é um jogo clássico e emocionante que oferece horas de diversão e entretenimento. Se você está procurando uma noite emocionante em roulette internet um cassino, não há como deixar de tentar a sorte na roleta americana!

Noite emocionante para o tricampeão de Grand Slam Andy Murray no Wimbledon

Foi uma noite emocionante para o tricampeão de Grand Slam Andy Murray no Wimbledon, à medida que o farewell de 37 anos começou com derrota no duplas.

Murray se aposentará do esporte nesta temporada e está jogando pela última vez no Wimbledon, um local que tem sido a casa de alguns de seus destaques de carreira mais memoráveis.

Derrota no duplas e tributo emocionante

Após a derrota no duplas ao lado de seu irmão Jamie na quinta-feira, Murray foi levado às lágrimas após uma cerimônia curta no Centre Court roulette internet que um montagem de roulette internet carreira foi exibido roulette internet telões grandes.

"É difícil porque eu gostaria de continuar jogando, mas não posso. Fisicamente, é simplesmente

muito difícil agora", disse Murray roulette internet entrevista no campo, após assistir ao {sp}.

"Eu quero jogar para sempre, amo o esporte. Ele me deu muito, me ensinou muitas lições ao longo dos anos que posso usar no resto da minha vida. Não quero parar, então é difícil."

Campeões de Grand Slam Novak Djokovic, Iga witek, Martina Navratilova e John McEnroe foram apenas alguns dos rostos famosos presentes na curta cerimônia, e eles se juntaram a milhares de fãs roulette internet dar a Murray uma ovação de pé.

A família de Murray, incluindo suas duas filhas pequenas, também assistiu dos bancos.

Agradecimentos à família e à esposa

"Mãe e pai foram um apoio incrível quando éramos pequenos ao nos permitirem perseguir nossos sonhos [...] Obrigado, mãe e pai", disse um Murray emocionado, antes de falar sobre roulette internet esposa, Kim.

"Ela tem sido um apoio incrível para mim, para minha família inteira, ela é a melhor mãe. Infelizmente, roulette internet alguns meses, ela terá que me ver todos os dias [...] Estou ansioso para o resto de nossas vidas."

Murray provavelmente retornará ao Centre Court no sábado depois de se inscrever para jogar duplas mistas com a compatriota britânica Emma Raducanu.

Ao longo dos anos, as multidões do Wimbledon se apaixonaram por Murray.

Uma jornada de sucesso no Wimbledon

Ele fez roulette internet estreia no torneio roulette internet 2005 como um adolescente e subsequentemente se desenvolveu roulette internet um dos melhores jogadores do mundo, roulette internet uma era roulette internet que Roger Federer, Rafael Nadal e Djokovic eram tão dominantes.

- Murray chegou à final de simples do Wimbledon roulette internet 2012, onde perdeu para Federer – uma derrota que moveu o astro britânico às lágrimas e mudou a percepção do público sobre ele.
- Um mês depois, Murray voltou ao mesmo estádio para conquistar uma medalha de ouro nos Jogos Olímpicos de Londres roulette internet 2012.
- A vitória iniciou um ano bem-sucedido para Murray, no qual ele conquistou o BR Open – seu primeiro título de Grand Slam.
- Em 2013, Murray encerrou a espera de 77 anos da Grã-Bretanha por um campeão de simples masculino no Wimbledon – um momento incrível agora gravado na história do país.
- Em 2024, Murray conquistou seu segundo título de Wimbledon – uma vitória que ele diz ser roulette internet favorita.

No entanto, lesões tiveram um papel importante nas últimas temporadas e Murray lutou para ser competitivo.

Ele esperava jogar simples no Wimbledon neste ano, mas não conseguiu se recuperar da cirurgia nas costas do mês passado.

Ele escolheu jogar duplas – um formato mais curto – com seu irmão Jamie, mas a dupla foi derrotada roulette internet sets diretos – 7-6(8-6) 6-4 – por John Peers e Rinky Hijikata na quinta-feira.
